

**Flexibility And Access
Like Never Before**

Control You Never Thought Possible

The new Honeywell Zio™ LCD Wall Module is truly the latest in LCD digital technology. Compatible via a two-wire, polarity insensitive bus with Spyder™ Sylk™ Enhanced controllers, the Zio delivers amazing flexibility and quick access to information.

CHANGE CONTROLLER VARIABLES

The Zio gives you control like you've never had from a wall module. Almost any variable in the controller can be viewed and modified directly from the wall module. It's that simple — and that flexible.

TWO-WIRE BUS

Directly compatible with Spyder Sylk Enhanced controllers, the two-wire bus simplifies wiring and frees up inputs and outputs. Never has such simple wiring delivered such vast communication capabilities.

CUSTOMIZABLE DISPLAY

Not only does the large display make information easy to read, the Zio allows you to customize the home screen for a specific application and end-user preference.

POWERFUL CONFIGURATION WIZARD

The Wall Module Configuration Wizard (embedded in the upgraded Spyder) is a powerful tool used to set up and configure Zio for Spyder applications. The wizard lets you create parameters and organize them under category names. The parameters can be accessed and modified at the wall module by the contractor and tenant, or restricted for contractor viewing only.

www.honeywell.com

Using the wizard, it's easy to accomplish everything from balancing a VAV box to simply viewing values like duct flow, discharge air temperature or almost any point in the controller. Network variables (such as outdoor air temperature, CO² ppm levels or even the National Weather Service current temperature for your location), if pulled into the local Spyder controller, can also be viewed at the wall module.

In addition, the wizard lets you set up the preferred home screen layout, timed override options, and fan and system override/status if used. You can even preview the actual wall module behavior in a virtual simulation screen to ensure proper setup before downloading.

Use the "Categories and Parameters" tab of the wizard to set up parameters as desired.

TWO MODELS DO IT ALL

Amazing flexibility doesn't have to mean a large number of part numbers. In fact, you can meet all your application needs with just two Zio models.

MODEL	DESCRIPTION
TR70	Zio
TR70-H	Zio with humidity output
